# Statistics for Brevduenord.dk 2026

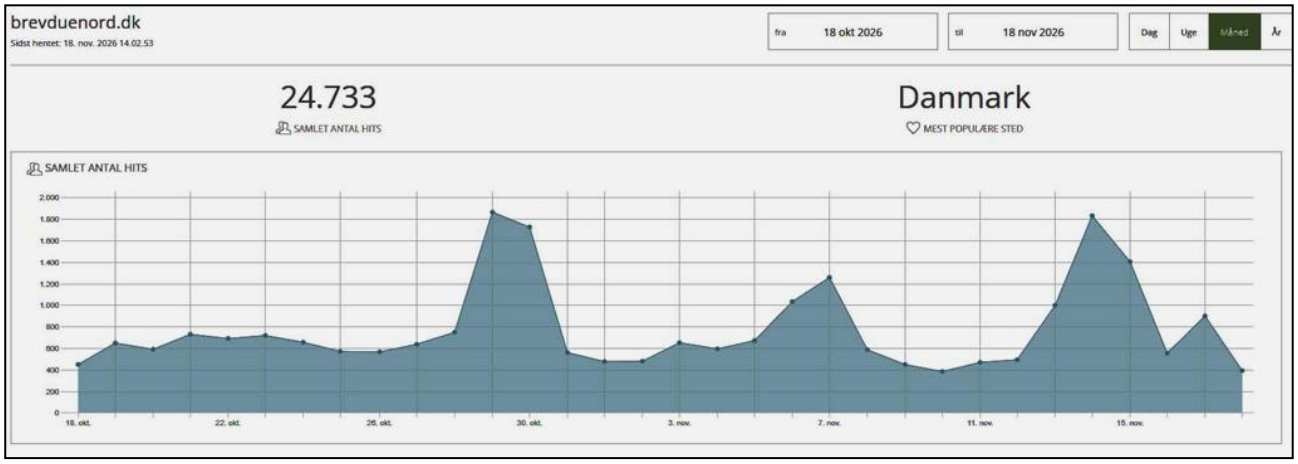
## Why this website in English?

**I live in Denmark and if you follow my pigeon home in GPS you know where I live and have my Racing pigeons. I start this webpage in Danish but as time goes I wanted more readers and started to make them in English and this gave a lot more visitors' to my webpage. When I was younger I worked 4 years in Nairobi, Kenya and therefore I speak and wrights English.**

## Statistics before and today

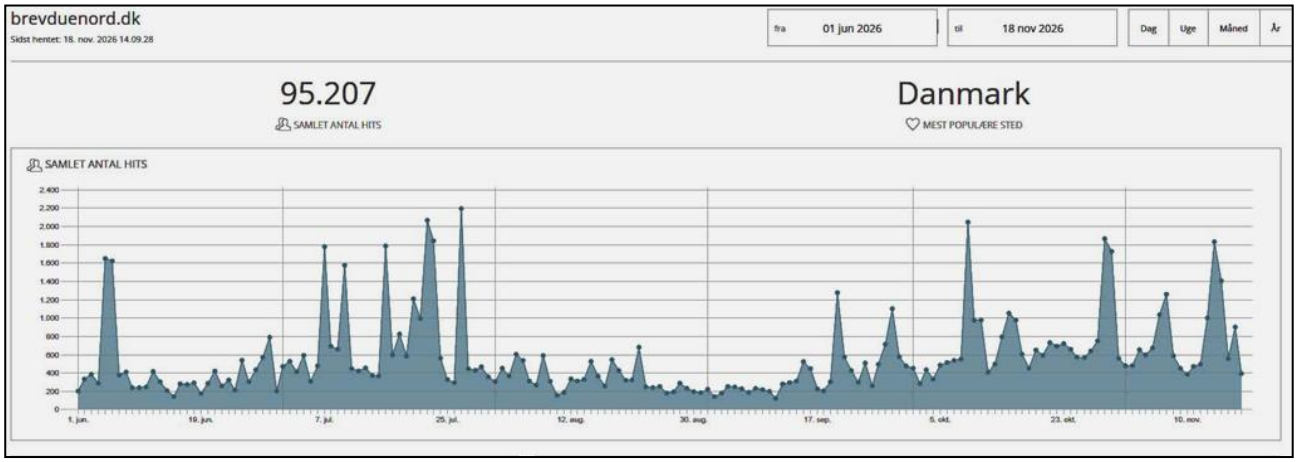
**In the years before I had around 3-4000 visitors per month and it gave around 43000 visitors per year. This year the number of visitors have exploded as shown underneath. This great number of visitors must be because of the program 3D Replay which are of the very first kind in the world of Racing pigeons where the fanciers can follow the pigeon in the race in all detail and from all angles!**

## Statistics 2026



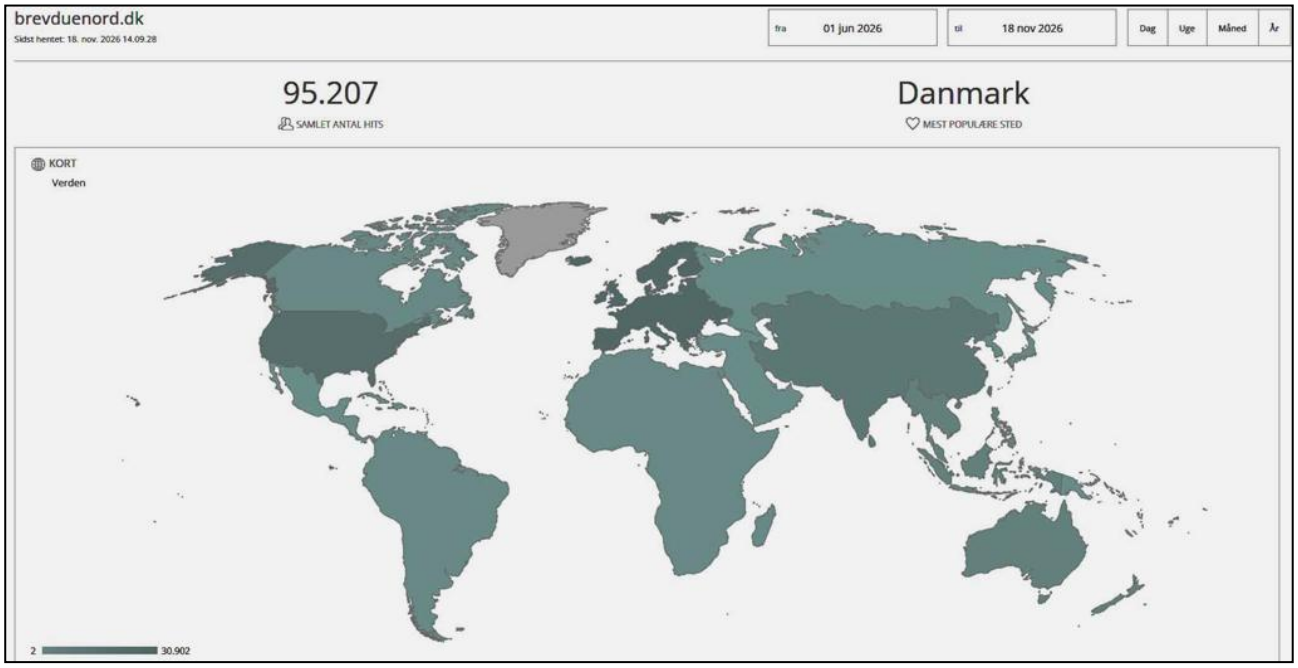
**Statistics for 1 month 18 October to 18 November**

**In the recent month the visitors have been around 25000 and as noticed some days are fairly high numbers.**



**Statistics for 5 month from 1 June until 18 November..**
**In June and Juli a lot of visitors and after the season a little low, but in Sepiember the numbers of visitirs goes upwards in good numbers. The total are as seen 95000 visiturs.**

## Statistics in countries worldwide



**The countries visiting are in dark color and as seen it is USA, Europe, India, China, South Korea, Japan, Singapore and Australia. Countries don't seen are Peru and Brasilia in South America. In Africa it is Morocco and South Africa. In statistics visitors in USA and Europe gives around half of the visitors.**

## The navigation in GPS

**In the 10 routes in 3D Replay there are 2 special routes where the pigeon are under influence by storms from the sun, and another under influence by a coldfront.**

**Firstly Racing pigeons navigate mainly after the earth magnetic field and Ultra violet rays and when this is disturbed by the sun or rays are missing it makes trouble for our pigeons and this is a well-known scientific fact!**

**Secondly all fanciers must know that the weather can give problems for our pigeons, and many of these meteorological difficulties are well-known fx. Cold fronts and very humid moist air. These meteorological situations have been known for many years to give problems for the pigeons!**

## 3D Replay is PR for the sport

**If you get Mode C with 4 GPS rings and use it on your own Racing pigeons, you can see how your pigeons fly in the landscape of your home region. Do you want to share this with other fanciers then just press Share and OK and find the Email and set in the program. This can also be sent for friends and relatives outside the sport and in this way be a form of PR for our sport! I think that everyone see the pigeons fly in 3D Replay will be fascinated to see our pigeon in the landscape!**

**I thank you all to visit my website and see my pigeons in the Danish landscape and I hope all well for you in our sport**
